100 YEARS

of Swimming goggles evolution.

1911

The year was 1911. We began life as a small lens manufacturer in Osaka, initially producing dust-proof eyeglasses and aviation goggles. As a boy, watching large wooden crates being loaded onto ships in the port, our founder began to nurture the dream that one day he too would make a product that would sell all around the world. That boy saw the stamp on the side of some of the crates as a symbol of his dreams: swan, spreading it's wings wide, about to fly off to see the world.

However, as he was following the path to achieving his dream, Osaka was hit by a fierce air raid. Even while running through the burning streets to escape, he desperately sought to save the materials from which his glasses were made by hiding them in a well. He succeeded in protecting them from the destruction all around him. And then the war ended. Although his house had burned down and it was a struggle just to survive, he began to manufacture Swan brand swimming goggles using the small quantity of materials that he had concealed in the well. All this to realize his youthful dream of making a product that would sell worldwide.

Since 1911.

From Osaka.

2020

More than a century has passed since then. Over the course of our long history of producing eyewear, SWANS has grown into a brand that encompasses swimming goggles, snow goggles, and sports glasses.

In particular, our high-quality swimming goggles, made using technologies cultivated over many years, are continually evolving as equipment that supports the performance of swimmers across the globe.

SWANS has grown into a large company and will continue to soar worldwide, carrying the great dream of our founder.

AS SWANS.

SWANS' manufacturing takes responsibility for all aspects of quality

SWANS does not merely make lenses: we are a manufacturer with an integrated in-house system for all aspects of eyewear production, encompassing everything from stylistic and technical design to technology development and manufacturing. Our developers themselves take a real-world approach, going out into the field and exploring the elements that hold the key to development through product testing and field surveys. You could search the whole world over without finding another eyewear manufacturer that conducts the whole process in-house in this way. That is because doing things this way takes a lot of time and effort. The reason why SWANS sticks to this style of business is that it is what makes our meticulous approach to all aspects of eyewear quality possible.

As well as protecting eyes during sporting activities such as swimming and skiing, and in factories and other production environments, it is essential to ensure visibility by preventing lens fogging, minimizing glare, and achieving a good color balance. To create ideal products that meet all these requirements, SWANS staff go out into the field and work together to translate the answers we find into reality. That is what we mean when we say that SWANS' manufacturing takes responsibility for all aspects of quality.

WHY MADE IN JAPAN ?

Japanese manufacturing and SWANS' advances

SWANS is an eyewear brand established by Japanese lens manufacturer Yamamoto Kogaku Co., Ltd. The Osaka-based company has, since its founding in the city more than a century ago, produced eyewear fitted with high-performance lenses for industrial safety and sporting applications, with "made in Japan" as its primary emphasis. What springs to mind when you hear the phrase "made in Japan"? Most likely, you think of high quality standards, with care taken over even the finest details, demonstrating delicacy and precision. However, the key question is what makes something worthy of being called "high quality"?

Manufacturing in Japan often produces items that demonstrate meticulous care over the finest details, involving artisanal skills with a long tradition or highly specialized industries, for instance. From items worn about the person, such as apparel, watches, and glasses, to precision machinery like household electrical appliances and cameras, and even cars, each product is designed to be used for many years over the course of your life once you have purchased it. High-quality items made in this way are what you might call "the good stuff," representing the common aesthetic of Japanese manufacturing.

SWANS' birthplace of Osaka is an industrial city, home not only to many large corporations, but also a multitude of small and medium-sized enterprises with highly specialized technologies and materials. These diverse industries have applied themselves diligently and learned from each other, honing their skills and giving Osaka's manufacturing sector a unique quality not found in other regions.

At one stage, SWANS encountered polycarbonate plastic. As a result of trial and error, we became the first company in Japan to develop an unbreakable lens, which offered more shock resistance than the fragile glass lenses used at that time. We continued to conduct research thereafter and succeeded in developing our own processing technologies for high-performance lenses, including mirrored and anti-fog finishes.

Today, SWANS is still infusing its products with the know-how that we have single-mindedly honed. Our aim in doing so is to create an even finer embodiment of all that the phrase "made in Japan" encompasses, which can accompany users throughout their long lives.

Today, the goggles that serve as swimmers' eyes are becoming increasingly specialized for all kinds of situations, as lenses evolve and designs with a strong sense of character are increasingly available. To maintain a wide open field of view and ensure that even a split-second clue which could lead to finding new opportunities is not overlooked, we leave nothing to chance in the technology and design of all our models. This section focuses on our technologies and goggles for all situations.

TECHNOLOGY & STYLE

feature 1

VALKYRIE SR-72

For swimmers who are constantly pursuing speed in their races day after day, swimming goggles are already part of their body and have to be something that continually draws out the potential of that body. Serving as the eyes for swimmers with an insatiable hunger to win, VALKYRIE gives them an insight into the rules for victory lying hidden within the race.

There is a mountain of interesting information in the pool alone. There are the other swimmers' movements and expressions, not to mention the flow of the water and the way it foams up. The curved lens with a wide view ensures that you do not overlook a single piece of information crucial to victory. The mirrored lens maintains a cool expression that will not betray your interest in your surroundings. Those who become winners control themselves and keep a watchful eye on every detail around them at all times.

The 3D cushion ensures a flexible fit, so that your goggles do not shift a millimeter, even when diving into the pool or turning. You can also train hard over and over again to reach your target time without worrying about your goggles shifting.

Go through your usual routine and these goggles will not fog up, even when you have swum so hard that your rising temperature threatens to bathe your whole body in sweat. These premium anti-fog lenses will make you forget that goggles fogging up is even a thing.

SWIMMER: RAFAL BUGDOL(POL)

TECHNOLOGY & STYLE

feature 2

ASCENDER SR-81

A huge swim field stretches out before your eyes. You are dazzled by the sun and buffeted by a strong wind that is stirring up waves. Despite feeling Mother Nature at her harshest, you plunge into the water and race headlong to get ahead. ASCENDER is the model for swimmers who want to dominate races in the great outdoors. These goggles always show you the path to victory, even in course environments that change at a dizzying pace.

They offer a wide view without parallel, enabling you to take in even extensive fields and other athletes at a glance. Underneath the lenses, your piercing gaze spots every movement from before the race even starts.

Once the race begins, the battle gets underway. Battered by the movements of the athletes' limbs and bodies, the water becomes choppy and mixed with sand. Even in the face of this impact, the flexible 3D cushion protects your eyes without shifting a millimeter. The robust mirrors in the MIT lenses will not scratch or peel.

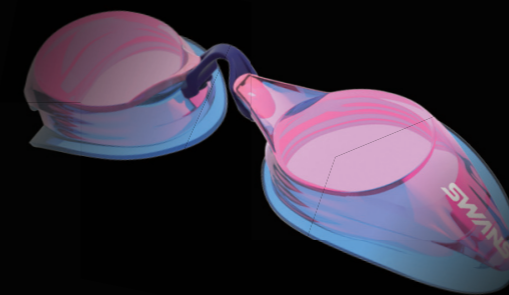

When the sun beats down mercilessly, your field of view is filled with nothing but glare. Equipped with photochromic capabilities, these lenses maintain the right level of brightness according to the intensity of the sunlight. You will not miss an opportunity to win, even in the most dazzling light.

NEW MODEL

NEW function

RSD
Round stream Design

From the second you plunge into the water, it feels smoother than ever as it flows around you. The new Round Stream Design (RSD) of the eye cups controls water turbulence and keeps the eye cups from shifting position.

The newly developed Round Stream Design is a shape designed especially to reduce the resistance of flowing water. The undulating shape of the eye cups controls the flow of water, creating a flow that has been carefully calculated to be smooth.

TECHNOLOGY & STYLE

feature 3

SR-7

Remake model of SR-1

Controlling the flow of water to bring even greater speed within your grasp. This is the ambition that resulted in the reincarnation of our long-selling SR-1 model. These goggles feature a form thoroughly calculated to minimize the resistance of flowing water and a fit designed to maximize that effect. Deep thought is no longer required. You will race ahead, feeling the flow of the water without any sense of drag.

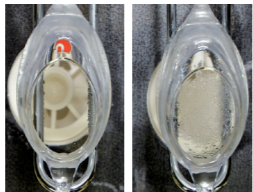

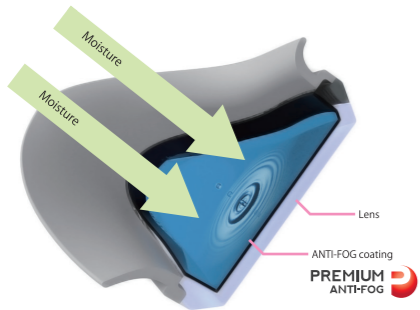

SWANS LENS TECHNOLOGIES

SWANS LENS TECHNOLOGIES

PREMIUM ANTI-FOG

Water vapor at 70°C is sprayed into both lenses by using steam generator to compare results.

PREMIUM ANTI-FOG Normal ANTI-FOG

Durability

Durability of premium anti-fog is 4 times greater than regular anti-fog.

Absorption

Moisture absorbing capability is 3 times more powerful than regular anti-fog coating

POLAR

Polarized lens

The lens reduces glare and reflective light from the water surface.

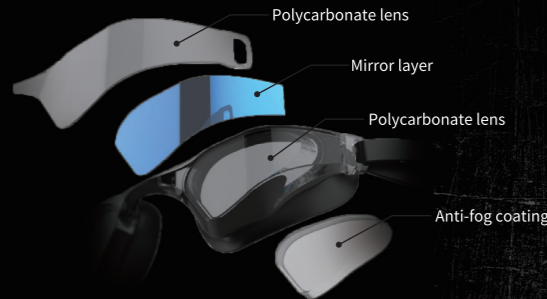

Polarized lens Normal lens

MIT lens

Mirror Insert Tech.

WORLD-FIRST NEW TECHNOLOGY

Clear vision and anti-scratch lenses. Mirror lenses are usually quite delicate, and are easily scratched or damaged over time. New MIT (Mirror Insert Technology) technology sandwiches the mirror layer between two polycarbonate lenses and this system prevents any scratching of the mirror coating.

Additionally, with this innovative MIT technology, for the first time we are able to make a mirror coating that is equally distributed around the curved lens. Therefore there is no change in color from front to the side of the lens.

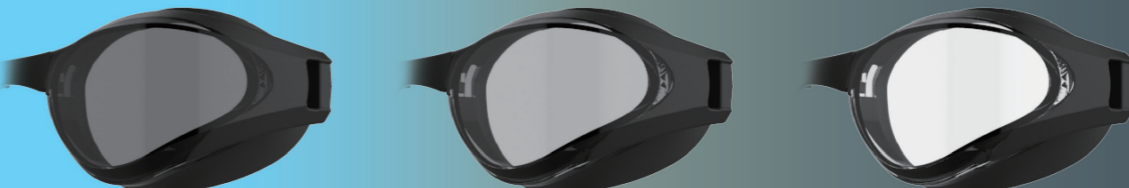

Photochromic lens

Photochromatic lenses change color automatically in response to the volume of UV rays.

DARK LENS

CLEAR LENS

Lens Function

Same as above

UV cut lens

The lens protects your eyes from harmful ultraviolet radiation.

Anti-fog coating

Anti-fog coating is attached to inside of the lens to prevent fogging.

Optic lens

Optic lens for short sighted. Some models are also possible to customize with specifications.

Mirror lens

Special mirror coating is applied to the lens surface which reflects glare and hence reducing strain on the eyes.

Curved lens

The curved lens provides a streamlined shape, which reduces water drag. A wider field of view is achieved with the curved lens.

Nose function

Nose bridge (3 sizes)

Interchangeable spare nose bridges are included.

Nose bridge (4 sizes)

Interchangeable spare nose bridges are included.

Nose bridge (5 sizes)

Interchangeable spare nose bridges are included.

Nose slide system

Easy to interchange the nose bridge with this slide system.

Flexible nose

One-piece flexible nose

Material function

Silicone

Soft silicone material

IRODOME

Offers good flexibility and softness. Compared with the normal elastomer material, the tensile strength is higher by 50% in our test data.

System function

Easy control

Adjust the strap easily even wearing swimming goggles.

3D gasket

This gasket provides maximum comfort during swimming.

Butterfly buckle

Easy to fit and suitable for female swimmers who has long hair as well as young children.

BLACKENED GOGGLES

for S/SB/SM 11 visually impaired swimmers

What are blackened goggles?

In order to ensure a fair competition athletes in the S/SB11 sport class are required to wear blackened goggles. SWANS blackened goggles comply with the World Para Swimming rules and regulations and swimmers can wear them in competition without concerns about disqualification (pending final goggle check at the end of their race by the technical officials.)
